github.com/syedayanali28

linkedin.com/in/syedayanali

Outcome-focused engineer building agentic AI, automation, and data products for financial services and operational teams. Combines hands-on Python and cloud engineering with product thinking—turning complex workflows into secure, measurable systems that reduce cost, accelerate decisions, and improve conversion.

SELECTED IMPACT

HK\$300K

saved by replacing a vendor data-validation solution

30 hrs

saved monthly through agentic firewall-review automation

3x

quote-to-booking conversion from automated follow-up

99%

lower price-retrieval latency with a custom routing engine

EXPERIENCE HIGHLIGHTS

Hong Kong Monetary Authority

Jul 2025–Present

Analyst Programmer · Business Enablement & Software Architecture

- Built an n8n agentic chatbot using RAG across a 2,000-PDF knowledge base for BRDR document search.
- Designed a Python data-validation framework for internal pipelines, test workflows, and AWS Lambda deployment, avoiding HK\$300K in vendor cost.
- Automated firewall reviews with Python, LLM-ready policy validation, and JIRA/Confluence MCP integrations, saving the security team 30 hours per month.

Jay Cee Ess Global

Aug 2025–Present

Software Engineer · Remote, Australia-based

- Helped revamp a legacy site into a high-performance web app, supporting AUD100K monthly revenue and a 200% increase in user intake.
- Created OpenAI, Slack, and Gmail follow-up workflows in Power Automate, tripling quote-to-booking conversion.
- Engineered an in-memory routing engine using Yen's K-Shortest Paths algorithm, cutting price-retrieval latency by 99%.

Universal Innotech Group

Sep 2024–May 2025

Junior Software Engineer

- Built a Neo4j graph layer for KYC identity resolution, reaching 99% accuracy and reducing processing from two days to under one hour.
- Maintained 10+ serverless ETL pipelines using Python, AWS Bedrock, and Step Functions for 50,000+ records.
- Created a Gold Dataset-based framework to benchmark 10+ AI agents for accuracy, reliability, and P99 latency.

PROFILE

City University of Hong Kong

BSc Computer Science

Minor in Business Intelligence · 2026

HK\$720K International Student Top Scholarship

Dean's List · 3x Tiger Talent Program

Additional proof points

Trained a real-time YOLOv8 fire-and-smoke detection model to 99% accuracy. Built computer-vision and sentiment-processing workflows with TensorFlow and OpenCV.
